Consisted of 325 breeder-designed combinations from 7 breeders. Trial was planted week 20 from 50 cell liners into white urns and moved outside week 24. Plants were fed 150 ppm 17-5-17 for the first two weeks and then 300 ppm for the remainder of the trial. Trial was removed week 40. Performance ratings were based on a combination of vigor, floriferousness, uniformity, color, durability, how well combo components presented together and resistance to disease, fading, and splitting.
