Growing Our Pansies

Our pansy growing process is different from other suppliers. Mast Young Plants pansies are grown on the lush side with adequate levels of nitrogen and phosphorus to encourage root and leaf development. We also use modest amounts of growth regulators to prevent internode stretch and tone the plant. This encourages a more mature plant, with 2-3 more leaves than average. Our growing process ensures that plugs are ready to take off and finish fast.

- Sowing and germination takes place in a temperature controlled cooler at 68°.
- Plugs are then grown in a greenhouse with shade curtains and fog cooling until they are approximately 3 weeks old.
- All trays are counted and patched in the greenhouse to ensure a minimum of 250 or 125 healthy plugs per tray.
- Pansy trays are then moved outdoors where they are grown under a 50% saran curtain. This outdoor growing helps to provide 50% ambient sunlight, along with summer breezes to strengthen and tone nodes.

Outdoor pansy growing under 50% saran curtain

Ordering Information

Tray sizes: Pansy trays are available in 2 sizes:

288 sold as 250

128 sold as 125

Minimum Order—to fill one small box

8 trays of 288 size

6 trays of 128 size

Program Dates: July through October

Ordering Deadline: 5pm Wednesdays. See order schedule for detailed dates by tray size and shipping weeks.

Chemical Log: A log of chemical treatments applied to the pansy plugs is emailed weekly to help with a beautiful finish.

Shipping

FedEx

In order to keep our pansy plugs healthy and avoid heat damage, we ship pansy orders in our small box with FedEx 1 day service.

Grower Truck

Discounted grower trucking services are available for large orders. Orders can be pooled together in an area for truck shipping. A rack exchange program is also available for orders of 100 trays or more.
